

## Victoria Braun

Extremely concerned about noise pollution, road congestion and break down of roadways, air pollution, health risk impacts, tourism impact, well water and aquifer impacts, Impact to local wildlife and water ways and fish and water fowl. Concerned about acid rain, those with health risks and children and all around those of us who live here. Concerned with property values and the impact this will have on a serene area that already holds smoke and other environmental hazards that come in to the area due to the layout of terrain and airflow. We are right across 41 on the Idaho side and my husband and I are extremely concerned of how this will impact our health, as well as the animals and food grown locally.
