Do we have in place the Local and State Authorities and protocols to test and monitor potential pollutants? As pollution laws get more stringent, are there smelter practices or processes that are expected to fall outside of new pollution controls? How do we ensure compliance? Will HiTest be obligated to fully restore the smelter site to the condition it is in prior to their use of the land? How will HiTest partner with local agencies, governments, and focus groups to maintain the natural beauty and clean air we enjoy?
