

## Sandpoint Area Seniors, Inc.

Please do not allow the smelter to come to Pend Oreille County.

We are concerned about the air and inversions that occurred making our environment harder for those with respiratory problems.

We do not need a smelter in this area.

See what happened with the smelter in Trail, B.C. and what it did to the Upper Columbia Basin. The natives there were rewarded millions of dollars for the pollution that caused many health problems, let alone the water and contaminated waterlife.

Saw some fish dried from the Columbia River and a pool of mercury came out of that.

Keep Canadian smelters up north or not at all.

Find clean ways, this is the 21st Century, there are better ways.
