In the chemical industry there is always potential for dangerous spills and exposure to toxic chemicals. Why should anyone be willing to work in an industry that poses this type of risk?

In PacWest's silicon chemical smelter career have they ever experienced a chemical related emergency such as a spill or injured co-worker due to exposure? What procedures are in place to handle a chemical/burn related emergency?

Does PacWest Silicon, LLC have experience when it comes to appropriate shipping and handling of chemicals and other potentially toxic products? Identify that experience.
