

Lee S

Although I am not from here, I have been spending a great deal of time in the Spokane area. This issue related to health concerns me, a graduate in a Public Health BS program. Smelters such as this have been shown to sometimes leach arsenic and cadmium into the water supply. This sounds like it could potentially be a lot like the Erin Brockovich scenario to me. The chemicals that have the potential of being leached are ultimately cancer causing as well as many other chronic diseases.
