

Julie McCurdy

I moved here from Southern California due to the pristine environmental conditions of this area and am horrified at the prospect of such an ill-conceived proposal as this silicon smelter.

I have a myriad of pollution concerns including (but not limited to) the following:

Heavy truck traffic

Heavy train traffic

noise

light

emissions

Impact on trees, plants, wildlife, water

There is no way we can be assured that this smelter will not have an enormous negative impact on the environment in the region.

This proposal must be stopped.

Thank you.
