

## Angela Fullick

I would like to comment on my strong disapproval of this project. Possible pollution from the Newport smelter would be detrimental to the health of our residents throughout the region. There is too much risk involved and too little reward for the surrounding areas. I have an asthmatic son who already has difficulty with the air quality. Adding to it will only compound his problems. And I know I'm not the only concerned parent. Additionally, this an environmental hazard and places our most precious asset (next to our children) at risk, our beautiful great outdoors. Please do not move forward with this project.
