

Andrew Kennaly

Hello,

Please list this comment in the "against" category in terms of building the smelter. I enjoy breathing clean air, and drinking clean water. As a beekeeper, for example, I depend on rain that is not contaminated because it waters plants that produce nectar, and my bees make direct contact with this nectar, and I eat and give others the honey they share. Our local economy needs to shift away from extraction modes of industry and adopt cleaner technologies and more earth friendly practices. This smelter would also affect my air quality because most of the prevailing winds would carry the polluted effluent toward Sandpoint. This smelter is not helpful to the majority of the population and needs to stop.

Thank you,

Andrew Kennaly
