

Theresa Hiesener

Please add the following question to my comments as I accidentally omitted it from my previous testimony.

ZOOLOGY/ORNITHOLOGY

1. Despite the Ramboll report, migratory birds do in fact fly over, across and around the proposed site, furthermore they roost, mate, eat and nest on and around the proposed site, therefore, I ask for a comprehensive study of migratory birds that travel along the "Pacific Flyway", "Pacific Coast Route" and the "Western Flyway" including many species of Hummingbirds, Waterfowl, Pipers, Woodpeckers, song birds and Raptors.

Thank You,
Theresa Hiesener
