

## Donna Molvik

PacWest claims it is not able to provide SO<sub>2</sub> emission control at the Newport location. If this is the case, then PacWest should locate to a site where physical constraints do not limit its ability to provide SO<sub>2</sub> emissions control. By not controlling SO<sub>2</sub> emissions, the people and environment near the site will be at greater risk due to PacWest's operations at the Newport location. What is the increased health risk for both humans and the environment if PacWest does not provide SO<sub>2</sub> emission control?
