

Robert Fullick

I have a number of concerns about the smelter.

1- Where will the air pollution go? My concern is that the air pollution of the smelter in Washington will significantly contaminate the air in Northern Idaho.

2- What will the amount of heavy metal exposure caused by the smelter, both in the air and in the water?

3- How will the smelter affect the aquifers of the Pacific Northwest? These are our most precious resources.

Questions respectfully submitted,
Robert Fullick
