

Donna DeLand

To whom it may concern,

I want to know if Idaho will be the recipient of the smoke coming out of the stacks. With the prevailing winds moving NE it looks like Idaho will be receiving it all with the location of the smelter. I'm concerned for our health, the quality of air, the smell, our water. I work for a private school that is located in the backyard of the proposed smelter. We have 160 students who play outside. Idaho did not ask for this.

Thank you
