

Brett Hansen

I grow organic produce in my garden for health reasons utilizing the clean air and water in Pend Oreille County. I know many other people who do the same.

How is HiTest going to reimburse me each year because I will have to go out and purchase organic produce elsewhere due to the poisoned acid rain that is predicted to fall as a by-product from this filthy smelter. Seriously, are they prepared to buy the air and water from the residents (i.e., pay for the damage)? Aren't there laws about taking something for nothing? I think they call that stealing.

So, for the DOE, what were sample soil and water tests in the surrounding areas in Grant county pre- and post- the Moses Lake smelter?
