

Stacy Kuranz

Our health and that of our friends, families and neighbors will be negatively impacted should the silicon smelter be built and operated in Newport Washington. The few jobs that will be gained are not worth the harm to our health and that of future generations. Allowing a company from Canada to come to our country and build and operate a polluting smelter goes against common sense. Please deny the permit to operate a silicon smelter in Newport and protect the air we breathe from its harmful pollutants.
