

Suzi and Justin Brack

My family and I are strongly opposed to the silicon smelter project near Newport Wa. The smelter would adversely affect our air quality, water quality and wildlife in the area. We live in North Idaho because we appreciate and truly value our clean environment. So, my major concern to be addressed is environmental protection, we don't want any pollution of air or water from the smelter and we want the fish and wildlife to be protected from any harm the smelter would cause.
