

## Deborah Keseloff

Living in Sandpoint, the proposed smelter isn't right across the street, so it may not seem like the impact is going to be huge to our community. BUT, the trucks on our roads, the rail car traffic, and the air quality will be HUGELY impacted. Sandpoint residents will be footing the bill for the increased wear and tear and damage to our roads. Sandpoint residents will be impacted by the truck traffic and potential accidents caused by the trucks on our roads. Some of us that live in neighborhoods that are cut off when a train is going through, will be impacted by the increased train traffic. The air quality of Sandpoint and Bonner County will be impacted as any pollutants will funnel down the Pend Oreille River corridor. I am opposed to the smelter for those main reasons and would like to see some answers to the potential negative impact to our community.
