

Anonymous Anonymous

The public wants to be informed and consulted regarding this project. Is there anyway PacWest can improve the process for the public? Can they provide better information? So much information is ever-changing making the project seem like one big quagmire of unknowns. I've attended many meetings regarding the smelter. A few years ago I even signed up to get information from HiTest and to date I have never received anything from them or the county regarding the smelter. At a Hi-Test public presentation hand outs we're lacking information and I couldn't see or hear their overhead presentation. I am disabled. I have physical and sight issues. There should be more consideration for disabled and elderly in regards to meeting, information, weather and transportation.

Please clear up some mixed information: kHq coverage from 9/19/2018

Will emissions from the smelter negatively or positively effect our local environment?

Commissioner Mike Manus has filed to be candidate for a second term. His campaigning included flyers we received in the mail. One of the bulleted items on on his flyer states... " Attracting new businesses and supporting existing businesses that provide good jobs while protecting the environment". Please clairiify if emissions from this smelter will protect the environment? If so please explain how emissions from this smelter will protect our local environment? I was at the Pend Oreille County fair where members of the FANSS of the Newport Silicon smelter had a booth and were soliciting signatures for their form letters addressed to Senator Shelly Short, Governor Jay Inside and Pend Oreille County commissioners. In those letters they claim that they are the majority. Martha McCurdy Winje PA in her Sepa comment to you also has similar claims. Is it true that smelter proponents are the majority? If so how do you know?

Will there be any storage or disposal of industrial and solid wastes from construction and operation of the smelter ?

Will there be storage or disposal of industrial and solid wastes from construction and operation of the smelter?

What is happening in Northport Washington regarding the trial B.C. smelter? Did that community suffer any I'll effects from the Trail BC smelter?

<https://northportproject.com/impact-of-teck-smelter-to-washington-community/>

Will there be any recourse if our health or quality of life here is negatively effected? If so what will be done to restore it?
