

## Michael Naylor

There are nine schools in the immediate area. Will the children be required to wear breathing masks to go outside to play? Will the schools athletic program's be effected by the emmissions from the smelter? Will there be bad smelter days where the children will not be able to go to school? Will air quality monitors be placed at every school in a 50 mile radius? Will the heavy truck and train traffic coming and going from the smelter effect the children from coming and going to school? Will every truck coming out of Canada be inspected for drugs? Will our border patrol need to be inforced? How many more fatal accidents will there be because of the heavy truck loads coming out of Canada? Will State and Local Police Departments need to increase their numbers? What fire district will be responsible for the PacWest smelter? What hazmat crews will be responsible? What will be the increased costs to the tax payers in both Washington and Idaho for these services. What happens when a fire breaks out at the smelter and causes a massive wild fire. Who will be held responsible? What happens if the is a massive power outage caused by the Smelter? How many customers can expect to be without power and for how long? The City of Newports new wells were funded by HUD. Will there be a NEPA in order to protect the Cities of Newport and Oldtowns water supplies? The PacWest Smelter is on top of three water recharge zones and is at the head waters of the little spokane river. How will the PacWest Smelter effect these water supplies? Will there be monitors water monitors installed. What happens if the ground water, head waters and recharge zones are contaminated by all the PacWest smelter opporations including the transportation of materials? Who will be held responsible? Will there be monitoring of the private wells in the area for contamination by the PacWest Smelter. If there is contamination of the water supply will PacWest Silicon be able to blame it on the Idaho land fill it happens to be next too? Well there be testing of all surface and ground water prior to any PacWest Silicon Project Activities? Will the PacWest facility be completely shut down if there is any contamination released or discovered that may effect the public or environment? Who will be held resposible in the event there is contamination discovered and the DOE failed to discover it? Will municipalities and private citizens be able to bring suit against the DOE and the State of Washington?
