

Susan Gaede

This is a horrendous action. Taking one of the most pristine areas in the state to pollute with noxious chemicals is irresponsible and reprehensible. At a time when our federal government is overturning acts to protect the population, it's wrong to take advantage and add to the problem. As a person who has a debilitating autoimmune diseases (Myasthenia Gravis) I humbly request that this be stopped so I, and others like me, can spend our lives without increased danger of early death due to additional toxic waste entering our air, food and water sources. Thank you.
