

## Shirley Kasper

I live less than half a mile from the preposed Pac West Silicon Smelter site. My concern is my water well. The amount of water they will require daily has the potential to cause my well to go dry . I believe Pac West will be getting their water from the same source as I do. The pollutants will also contaminate my property and the air we breathe. Who will guarantee clean clear air? Will you monitor the air quality during the very stagnant times of the winter months right by the dump road and on the Rena Rd neighborhood?
