

Margaret Underwood

I have lived in Newport for more than 30 years. We have always enjoyed the small town feel including little traffic and always being able to find street parking very close to the bank, pharmacy, library, etc. Many of us are now senior citizens and need street parking close to places we do business. I want the EIS to include extensive data on our current traffic patterns during both tourist season as well as off season. I want comprehensive data on the current parking availability in Newport. I want to know how a smelter will impact the traffic and parking availability in Newport. How will PacWest mitigate this?
