

# Chandra Griesemer

As a lifelong resident of Bonner County, and understanding the pristine environment in which we live in Bonner County, I would like to know how the residents of Idaho will be protected from the Pollution of this project.

1.)Exact amount of environmental pollution...

2.)Traffic pollution...

3.)Light,and sound pollution...

How safe will be to eat my garden veggies if this plant was running at min. capacity, as well as maximum allowed capacity.

What will the air smell like, will the air be safe for my pets? What about the trees, plants, and wild animals in our forests, lakes and streams?

What do we do when our roads are destroyed in Idaho, and we taxpayers are the only ones who are required to repair them.

I would like to know who will liquidate my damages when my home value tanks and I can't sell my brand new home?

Who will pay for my annual lung checks to make sure I am not getting any number of the ailments that are associated with this type of industry?

How can you assure me the pursuit of happiness, when this plant goes against everything in the world that makes me happy, which is living in a CLEAN, unpolluted mountainous area, with rivers lakes and streams as far as the mind can imagine and NO heavy industry existing.

It is also important that the air be monitored on the site for an entire year, before any permits are even considered.

If impact studies must me done on animals, they should need to be done on humans as well.

Who will act as the hazardous emergency response in case of accidents?

Exactly how many workers will be employed from USA? Out of those, how many would be from Idaho?

Will they be using Bonner County Roads and Bridges? If so, will they have to pay a fee for their impact to that infrastructure?

What exactly will the operating hours be of the plant?

What will be the shifts of the employees?

How many employees on site at all hours.(for safety concerns)
