

Marcy Hogan

The proposed smelter will be located in an area that attracts visitors for recreation, hunting, fishing, mountain sports and other outdoor activities. How does the proposed smelter plan to keep the area/environment clean, healthy and safe for the above mentioned activities and the wildlife that inhabits the area? All manufacturing produces by-products. The raw materials and by-products of silica metal extraction are known to be extremely unhealthful to humans. How will the proposed smelter eliminate or dispose of these by-products?
