

## Denise Teeple

You need to study how the affects of the emissions coming from the proposed smelter aren't going to affect the North American Allegator Lizard in any sort of a negeative way. How is it going to affect the area these lizards live in? What is the acid rain going to do to plants and insects this lizard relies on to survive? <https://www.burkemuseum.org/blog/northern-alligator-lizard>,
