

## Louise Kulzer

Thanks for taking my comments. I had asked during the recent zoom session if the CCA applies to fugitive emissions and was told it does. However, the WAC as drafted does not make that clear. I am particularly concerned that methane emissions from pipelines and pumping stations be regulated and included in the CAP and invest system established by the Act. These emissions are significant and need to be controlled using the power of the market that will be set up. Right now I'm not sure if pipelines are facilities or suppliers, if indeed they are included at all. Please make sure that pipelines, and in particular the fugitive emissions from pipelines and pump stations, are included in the rule. Thank you.
