

Jay Gordon

Rachel,

I cannot see that table 4 on page three shows RNG as a motor fuel from any sources...right now we have 1 dairy farm making compressed, scrubbed RNG into pipeline and expect more farms potentially along with existing and future electric generation from "unprocessed biogas". Could use clarification - I think on dairy RNG as well as food waste derived rng. Other commenters have mentioned that the RNG aspect of table might need clarified as per CI score for hydrogen sourced from Bio Methane (??or a CI score for electrical sourced/produced from RNG ??)

I may be missing something here on this, but would rather ask now and be wrong than miss asking the question.

Thanks for all your hard work on this.

Jay Gordon
