

Matt Hamilton

I would like to see a requirement to post the cost at public charging stations just like the gas stations: \$0.10 per kWh vs \$4.50 per gal. My last Puget Sound Energy bill charge me 9.56 cents per kWh for the 1st 600 kWh and 11.55 cents after that. I know the charging station owner deserves to make a profit to recoup his capital expenditures, but the customer should know the cost before he fills up.
