

Olah k

I want everyone to breathe clean air. I worry that young people will have to deal with more polluted air in the future. Thus, I strongly support the proposed rule for the Climate Commitment Act Program.

We passed the country's strongest law capping carbon pollution, the Climate Commitment Act. I am eager to see the benefits including deep reductions in climate pollution, improved air quality, investments in clean transportation & clean energy, with investments in overburdened communities. It's important that the proposed CCA rules maintain the integrity of the cap. The goal of this law is to achieve our greenhouse gas limits & improve air quality, especially in overburdened communities. Ensuring that emissions do not exceed the cap is critical. When designing program details, maintaining the cap should be one of the primary goals!
