

Rachel Molloy

Dear Mr. Grice,

As the impacts of 1.2C climate impacts become more and more apparent, Washington has been leading the pathways forward in passing strong carbon pollution caps and the Climate Commitment Act (CCA). As Redmond, WA resident and member of the City Environmental Sustainability Action Committee there...I speak for myself in urging action to make the necessary deep reductions in greenhouse gases, increasing investments in efficiency and zero emission upgrades, and assisting those communities least able to rise to the challenge without assistance, and overall resiliency preparedness.

Please maintain the integrity of the cap. Achieving caps and reductions is paramount to success in lowering global 420ppm carbon and rising methane levels. The physics of this situation makes this non-negotiable, and the primary goal.

CCA investments must prioritize significant improvements in air quality of overburdened communities, with their input, especially Black, Indigenous and communities of color.

Thank you for considering my comments.

Sincerely,
Rachel Molloy
