

## Joshua Johnson

Please do NOT adopt this rule!! Supposedly "clean" vehicles actually cause more damage to the environment than do standard vehicles during their life cycle. This mandate would cause more damage to our environment, not less. Also, our economy is not ready for a 100% clean vehicle transition. Our infrastructure can't handle the added load of charging millions of vehicles every day, and the technology isn't sufficient to meet the transportation requirements for moving goods and people in this state.

If passed, this rule will be a disaster for the environment and our economy.
