

## Mark Berntsen

Our government is getting to large in it's overhanded reach telling citizens what to do. our infrastructure is not set up for EV only. in a free market people can choose to have gas or electric or hybrid. I personally have had two Toyota Prius hybrids and I love them. I also have a gas powered F250 truck for doing my heavier work. requiring this kind of a change across the board is going to hurt the environment and the community, especially when you want to tear down dams which create hydroelectric power necessary to charge all these vehicles. I strongly urge NO in this vote.
