Please approve the the Advanced Clean Cars II (ACC II) Regulation

This rule will help us get to the emissions-free transportation future that is key to getting carbon emissions down and saving us all from the worsening effects of climate change. It will help us with a smooth transition and make electric vehicles more affordable for all. It will save drivers money on fuel and maintenance and help put the fossil fuel industry, which has lied to us for years about the damage that their products do to our planet and our quality of life, in their places. I am tired of their cartel and outsized political influence. It is time to move on from gasoline and diesel powered transportation.
