We please note that in the global concept the US is but a small fraction. That would be point one. Until batteries for these vehicles are made and kind more realistically it is worse for our environment. That would be point two.

Electricity comes from somewhere, we do not have the ability to keep up now so if you are charging millions of vehicles how does this make sense? Point three.

We can be self sustainable if we use only local petroleum resources. There is no reason to import. That would also employ a large number of people at a living wage. Point four
