

Marc Christensen

This has to stop. It is absolutely unconsciously wrong to allow an unelected bureaucracy from another state to force their policies on the citizens of the state of Washington. This violates our state and federal Constitutional principles as well as any common sense.

The idea that the people of Washington won't suffer unsustainable harm to their lifestyles and livelihoods by being forced into electric vehicles that lack adequate capability is ridiculous. Almost as ridiculous as the idea that mandating electric vehicles in the state of Washington can have any material effect on global climate change. This quite honestly stupid idea coupled with the Governor's equally stupid idea of breaching lower Snake river dams will destroy the economy of Washington. For what, to send some virtual signal?

Time for you people to recognize that inexpensive power and carbon based transportation is critical to our state and stop this pursuing this nonsense.
