

Hugh Reichenbach

This is a completely unfair and unnecessary move by the Dept. of Ecology. These EV's are too expensive and are not practical for the average working household. These vehicles will not stop climate change from happening around the world. You will be making a serious error if you try to adopt anything like the insanity that has taken over in the state Of CALIFORNIA. Please, I beg you, give this your thoughtful consideration and save our state from this flawed idea.
Thank you, Hugh Reichenbach
