I support including the Advanced Clean Cars II and low-NOx Omnibus rules in Chapter 173-423 WAC. ACC II will accelerate a quick, smooth, and efficient transition to clean electric cars in Washington. By committing the state to a gasoline-free future, ACC II will help make affordable and economical EVs more available to all. It will save drivers billions of dollars on fuel and maintenance and it will reduce the air, water, and climate pollution that disproportionately impacts communities of color and low-income communities. The low-NOx Omnibus rule ensures that new diesel trucks will run as cleanly as possible at every point in their duty cycle, and that their lower emissions will be maintained over the truck's useful life by requiring longer warranties, which will protect the trucks' owners from expensive repairs. It will help clean the air in communities close to ports, railyards, and distribution centers that are now heavily impacted by pollution from heavy-duty truck traffic. Washington's citizens deserve to realize the benefits of both rules.
