

Paul Dutky

Please encourage EV's in both the commercial and individual sectors - we have two, a Tesla model S and a hybrid Pacifia minivan. EVs are a dramatically better transportation mode than gasoline powered cars. Maintenance is minimal. Reliability exceptional. Performance outstrips any gas engine car. Safety is vastly improved. Air and water pollution will be reduced significantly. Dependence on foreign oil will be reduced, enabling a much saner foreign policy. The more EVs are purchased, the quicker government will fund electric grid improvements. There are few downsides to EV adoption, and those that exist are more easily addressed than atmospheric/ weather/ climate changes related to burning of fossil fuels.
