

Michael Crumpacker

This is an unrealistic law that you are trying to ramrod down the throats of Washingtonians. The country and state are not ready to make this change over. You and your constituents are trying to force Washington residents down an unsustainable path that is simply not possible. We do not have the power grid to support an all-electric vehicle environment and there is no way that the car manufacturers can produce enough EV's to replace all the vehicles in Washington state in the timeframe that you have laid out. Plus, the simple truth is that many people that live in Washington are simply not able to spend the amount of money that it takes to purchase electric vehicles. Please start representing the people of Washington instead of pushing your agenda. We are not children and quite honestly, we are fed up with you and your insane policies.
