

Bernadita Sanner

I oppose Chapter 173-423 WAC, Clean Vehicles Program. We are financially capable to pay for an enforced mandate. I have not seen any research to support this.

Then, our state and all states that follow this mandate will have to deal with the waste, recycling of these cars.

Might I suggest that one studies how to recycle gas emissions? Could the gas and water be recycled for extra power?

How about recycling the metal, plastic etc., from old cars?

How about plant based fuel other than corn?

Also, more jobs will be eliminated not to mention the training required for new vehicles, new charging stations.
