

Hermann Bros. Logging & Const. Inc.

I certainly hope that any rule making takes into account the BIG picture--that being the cost of changing our fleets to EV. That being that most of our VALUE of our businesses is in the value of our equipment. All of this equipment will be of NO value after 2035. What to do with all of that worthless equipment?

Next concern is where is the electricity to be sourced. This should be included in the resolution or rule.

A wise advisor says that if you bring a problem--as this concept exemplifies-BRING A SOLUTION.

I want to see the complete picture addressed.
