

Michael Lampi

ACC II will help accelerate a quick, smooth and efficient transition to clean electric cars. By committing the state to a gasoline-free future, ACC II will help make affordable and economical EVs more available to all. It will save drivers billions of dollars on fuel and maintenance. It will diminish the air, water, and climate pollution that disproportionately impacts communities of color and low-income communities. With the large number of different models of electric vehicles appearing in the market already in 2022 plus the ones already on the road, there will be plenty of inexpensive used vehicles available for lower-income people to purchase by the 2030 deadline.

We want 100% Clean Cars by 2030!
