

## George Robinson

Please think about what you are proposing, no more gas/diesel powered vehicles. The governor wants to rely solely on "renewable" electricity to charge these electric vehicles. Solar, wind and any other sources in that category cannot support the energy demands and thus the government's hope to control the movements of it's citizens will certainly be realized when there is not enough power to even get to work. Washington's governor is dead set on controlling everyone with climate change as his reason. Washington's economy will go to rock bottom with no money to even pay taxes. All electric vehicles is an expensive way to go. This cannot be Sustained. Please reject this plan.
