

Richard Owens

I'm certainly not against transitioning to EV's, but let's do a reality check!

- It's mathematically impossible to have 100% EV's by 2030 in the state of Washington!
- Electrical charging needs for all the new EV's will increase strain our electrical grid!
- What's the big benefit... we still use a larger percentage of fossil fuels to generate electricity!
- The cost-benefit analysis really needs to be considered on this!
- Please consider a slower more realistic transition toward the EV market.

Sincerely,
Richard Owens
