

Gary Smith

Please allow the citizens of WA to make their own decision on whether they prefer to own a gas powered, hybrid or all electric motor vehicle. We did not give the legislature a mandate to usurp our freedoms as Americans. There is no "science" that guarantees any reduction in worldwide production of CO2 will stop or even delay fluctuations in the earth's climate, which has very very gradually changed over centuries and millenia. Forcing WA citizens to spend their personal funds and/or taxes payed to our state for no proven gain is all the more ludicrous when considering that huge nations of people like China and India will make no changes in their fossil fuel use until 2030. You want to bet they wont do it then either? China may still be constructing new coal plants! Stop the insanity, please!
