

## Debra Blodgett

This mandate is notoriously progressive and is going to hurt our lower and middle class citizens of Washington state. The cost of electric vehicles is more than most people make in a year making it completely impossible for most people to purchase.

The rare earth minerals mined to make the electric batteries has left environmental disasters. Have you even seen the waste land it leaves behind?

This is a horrible solution to try and stop "climate change," which if any smart person knows, has been scientifically disproven and is a total scam. It has become a power grabbing, money making religion.
