there is not enough electrical generation to support this ! we have an abundance of natural gas & oil. stop this destructiveness wind & solar can never fill the gap . solar panels are extremely expensive & only have a 20 year lifespan, wind power has the same lifespan & is also extremely expensive & unreliable, not to mention killing thousands of birds per month & being an eyesore on the landscape as well as noisy . with a lack of electrical generation to support this you also want to tear down the dams ? will we all be sitting in the dark while some people are charging their cars ? please stop this insanity !
