

## Carl Baker

I support Ecology's proposed rules, Chapter 173-423 WAC – Clean Vehicles Program, and Chapter 173-400 WAC, regarding air pollution regulation.

I support expanding the adoption of California motor vehicle emission standards and other changes, to comply with the Motor Vehicle Emission Standards law (RCW 70A.30.010) which states we must adopt California vehicle emission standards. I also support policy that will hasten the transition away from fossil fuel cars to EV's, since transportation is the main source of GHG pollution in our state.

I also support Chapter 173-400 WAC, General Regulations for Air Pollution Sources because air quality has become more of a problem with the extra burden of smoke from fires, ozone as temperatures increase. We have had many days of poor air quality in the Tri-Cities and I am concerned for the children and elderly who are living here.
