

## Bernadita Sanner

I oppose this mandate 173 423 WAC. It is unrealistic to force people to have a certain type of vehicle when not all people have the finances for a ZEV, 173 423 WAC. There is not enough research to back this concept or even show proof this works. Our country can't even keep the fuel rates down. If you keep the reserves here for the US and not give it to other countries we will have enough to keep going.

I suggest research of alternatives like Ocean sludge conversion for alternative fuel.  
How about vacuuming the polluted air and extracting particles and reuse it.
