

## Theresa Elliott

Our state and our citizens can't afford to switch over to all electrical vehicles in this short amount of time. Electricity is too expensive and we don't have the charging stations needed to support the demand. Not to mention the outrageous cost of battery replacement. We don't have enough trained technicians to maintain supply and demand of maintaining electrical vehicles.

How can our general population afford this? How can our business owners afford to install this service to customers?

The traffic backups in our state won't support electrical vehicles. Cars will be dying and abandoned on the roadways.

We need much more time to make this conversion.
