

## Mark Hay

Having worked in the electric utility industry for more than 30 years, there is no conceivable way the existing electrical infrastructure, let alone generation infrastructure, is ready for the added load of electric vehicles. Flowery language and platitudes won't improve the situation. The governor and his advisors need to get out in the public and talk to those of us in this industry. Also, why mandate electric vehicles. The language used is very limiting. Our governor touts his approach to science. Unfortunately, he doesn't appear to know science or engineering. Let free enterprise dictate the technology used for future transportation. Putting all of your proverbial eggs in the future of electric cars is ridiculous and fool-hardy.
